

ORDERING SYSTEM

E-commerce

First chapter: Defining the problem

1- Introduction to the project and the beneficiary's commitment

Our project is about an E-commerce System which will carry out the business activities through the Internet; a system, where both-offers of sale and their acceptance – are made electronically. and goods or services are delivered in tangible or electronic form. The beneficiary side will be for a clothing company which called **Eleman** company and it's in Clothing Industry, it sells its products to retail companies and to normal customers.

Our system will help them in helps organizations to reduce the cost to create process, distribute, retrieve and manage the paper based information by digitizing the information, improves the brand image of the company, helps organization to provide better customer services, helps to simplify the business processes and makes them faster and efficient and reduces the paper work.

2- Project Scope(area)

Background:

the history behind the system is to find better solutions, Effective and Achievable for the any business dose not have a system to make the work easy for them.

The need behind the project is to simplify the business processes and makes them faster and efficient and reduces the paper work.

OBJECTIVE:

the major objective is to provide help with a computerized system for who ever would be in need for this.

The achievements gained at different stages of project life cycle :

First aid training,

Database skills,

Other computing skills,

Language skills,

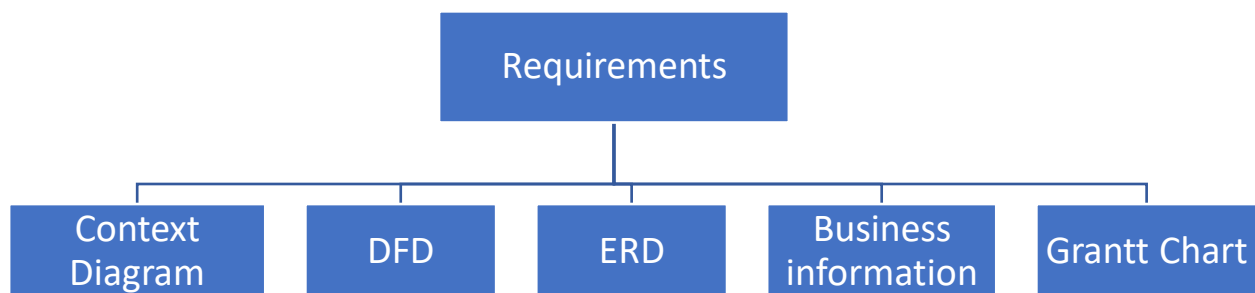

Commercial awareness,

Internal negotiation,

Experience of responsibility,

Experience of tight deadlines.

Resources required

Target audience

The main target audience are kids and then adults

Restrictions and Limitation of the project:

Beside the benefits of e-commerce, both technical and non-technical limitations of e-commerce have been considered.

Beside the benefits of e-commerce, both technical and non-technical limitations of e-commerce have been considered.

Beside the benefits of e-commerce, both technical and non-technical limitations of e-commerce have been considered.

Uncertainty and lack of information :- the company we are dealing with has never used any electronic means of communication with its customers as the internet is an unknown mode for them.

Previous works: there are no previous work except for they do their work in paper and because that they face a lot of trouble in dealing with huge data

Project development stages : Analysis

Verbal:

We collected all the data we needed in this stage through...

- 1- Pre interview
- 2- The interview
- 3- Post interview

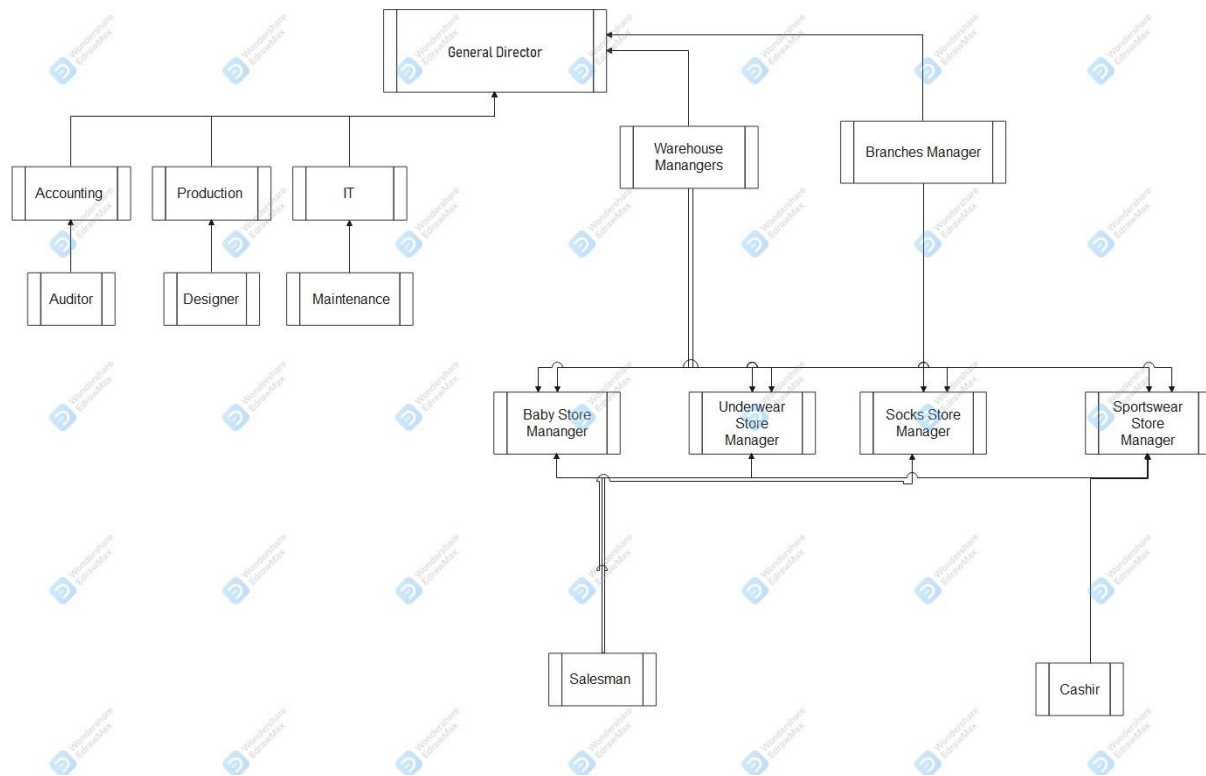

Technical:

We first draw on papers then used EdrawMax to turn it into computerized and built our Database schema with Microsoft WorkBench.

OVERVIEW ABOUT THE COMPANY : ELEMEN COMPANY

Elemen company is in Clothing Industry, it has 4 Stores & have 9 workers at every store and many WareHouses, it sells its products to retail companies and to normal customers, it has no computerized system, they do their work in paper and because that they face a lot of trouble in dealing with huge data, and they may face fraud from other employees, they need the computerized system to daily check the inventory, and to track the company financial situation with weakly reports (sales , AR & AP accounts), they also need an E-commerce system to record sales online

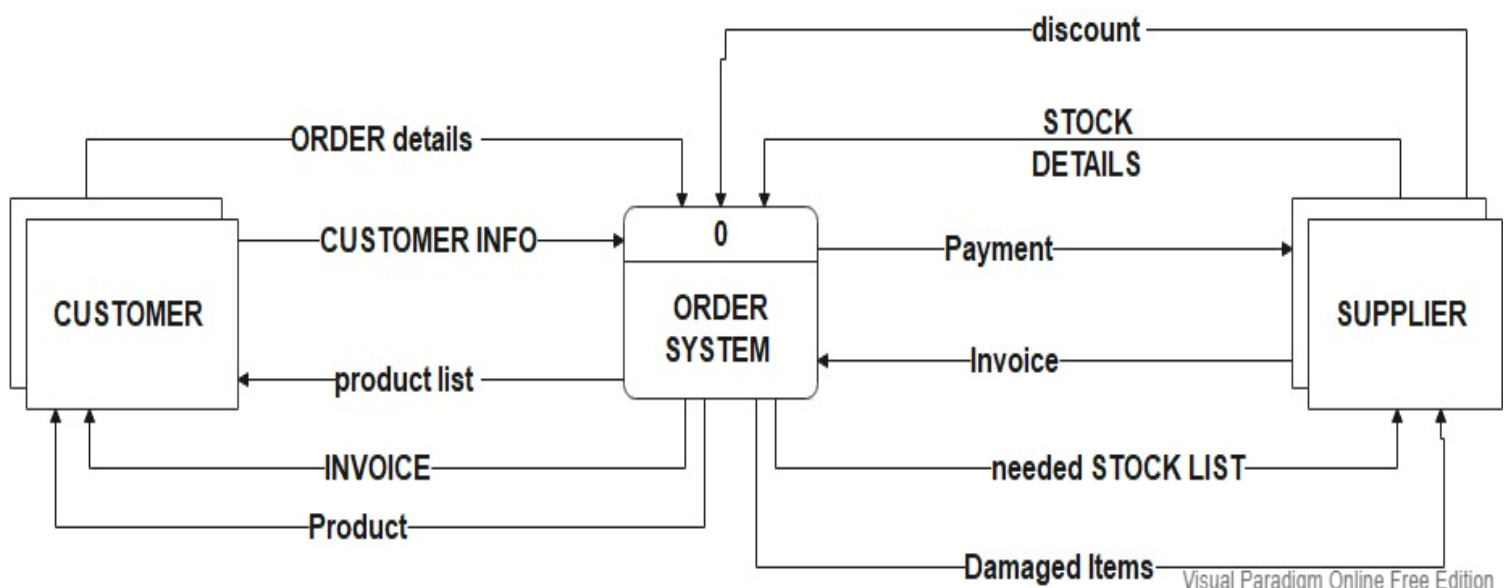

ORGANIZATIONAL STRUCTURE

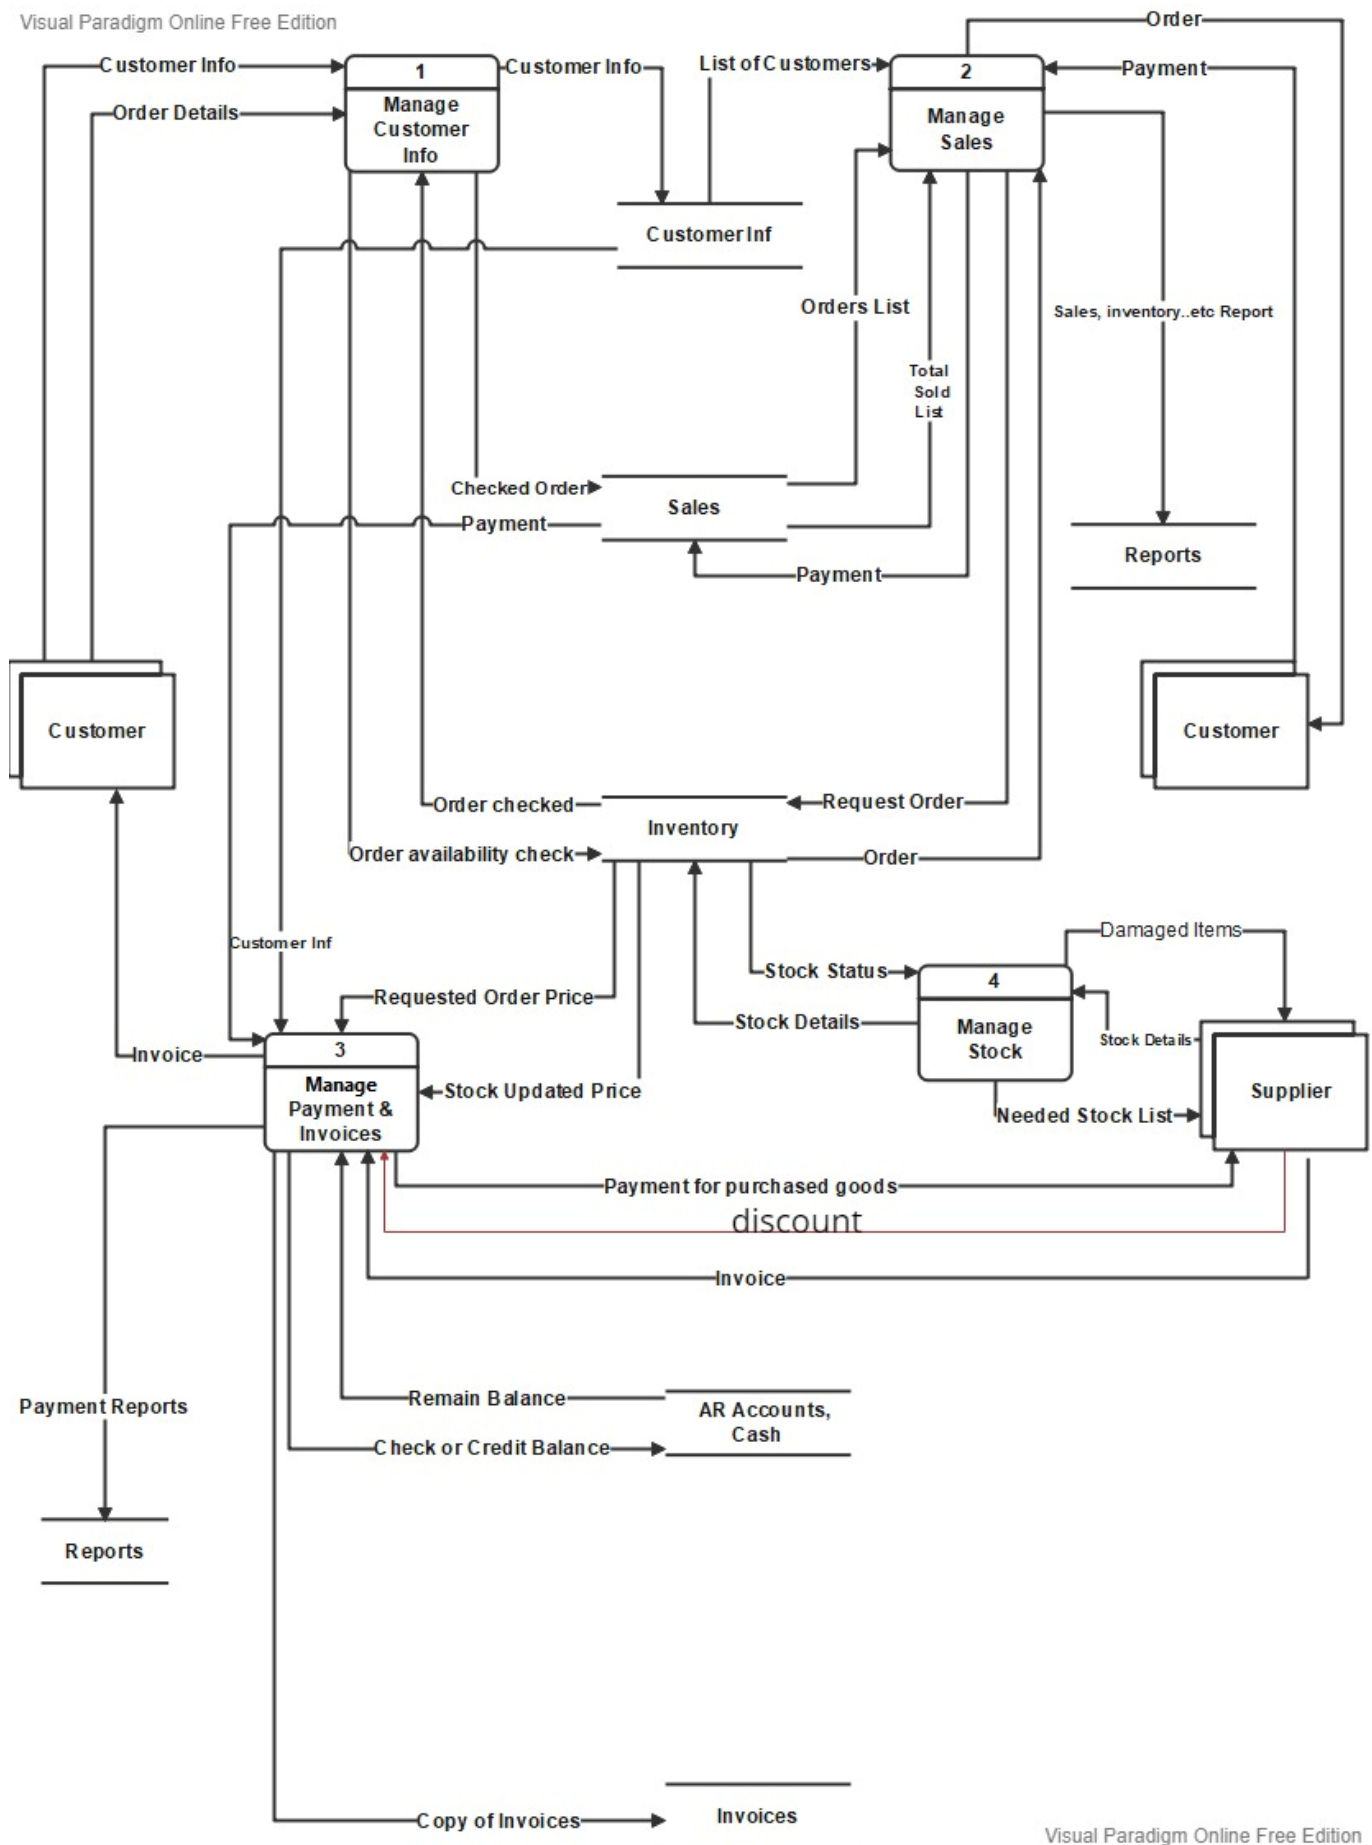

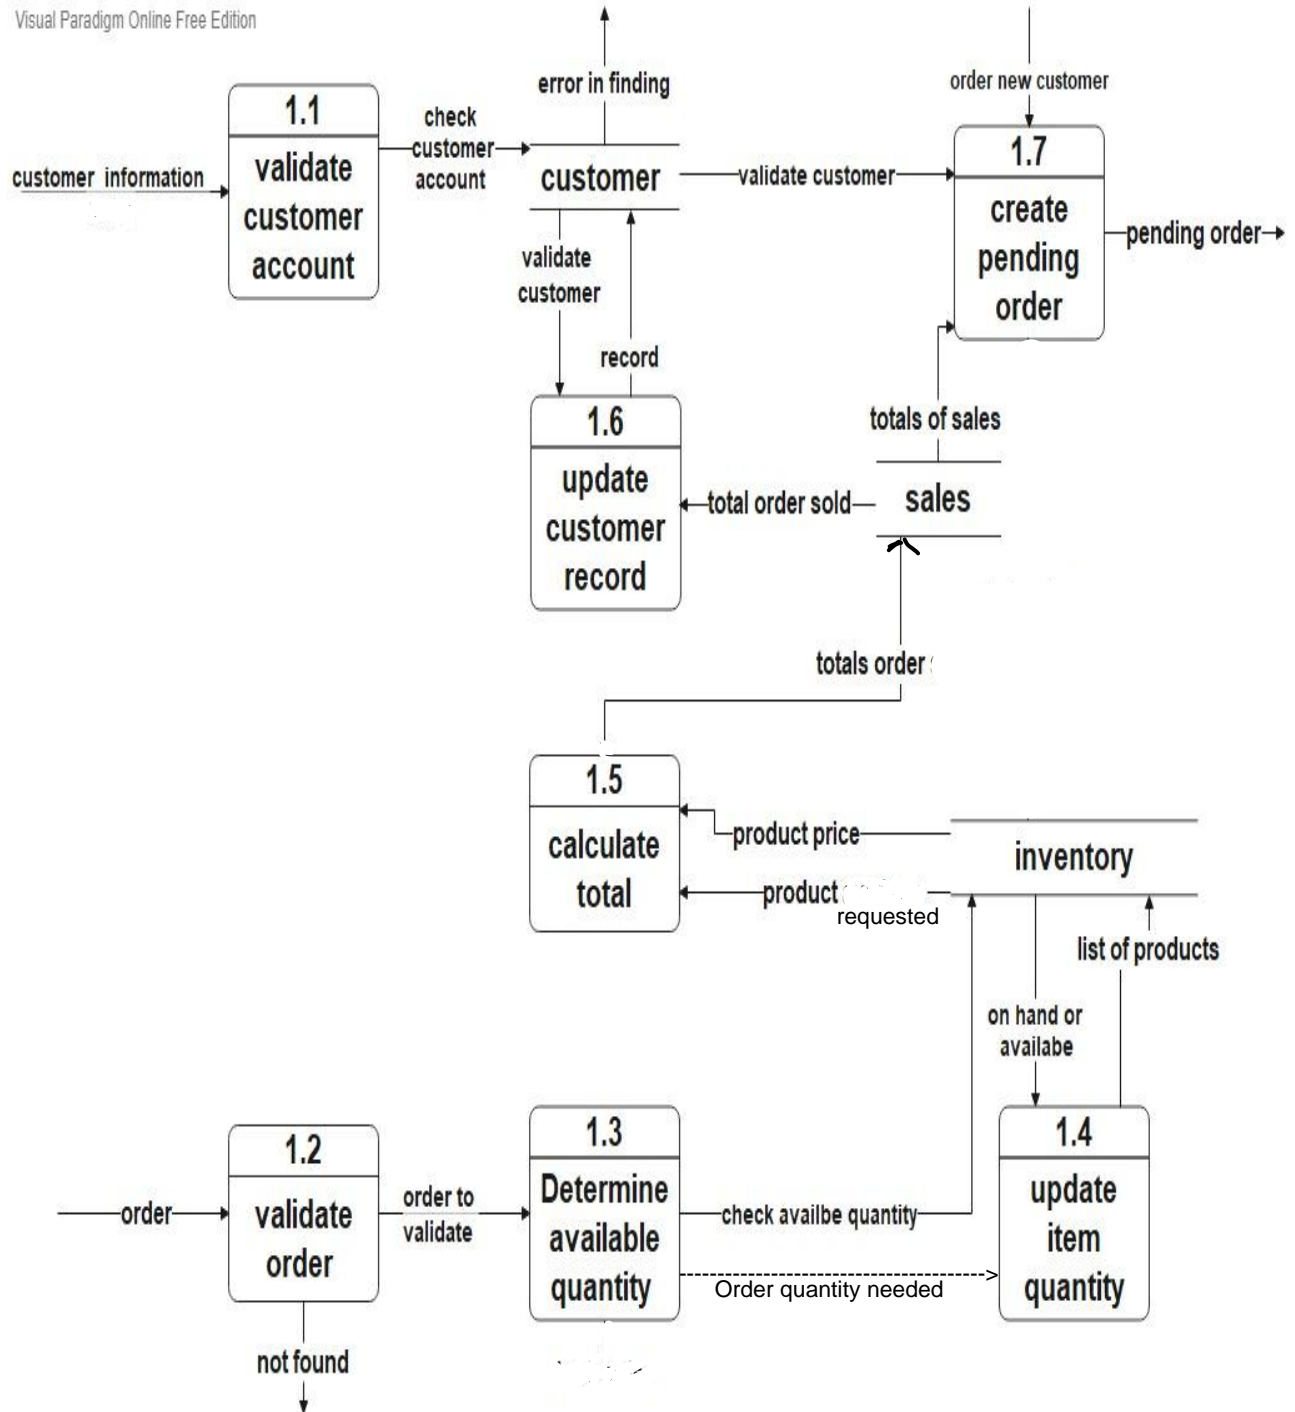

EXAMPLE ON THE CURRENT PAPER SYSTEM

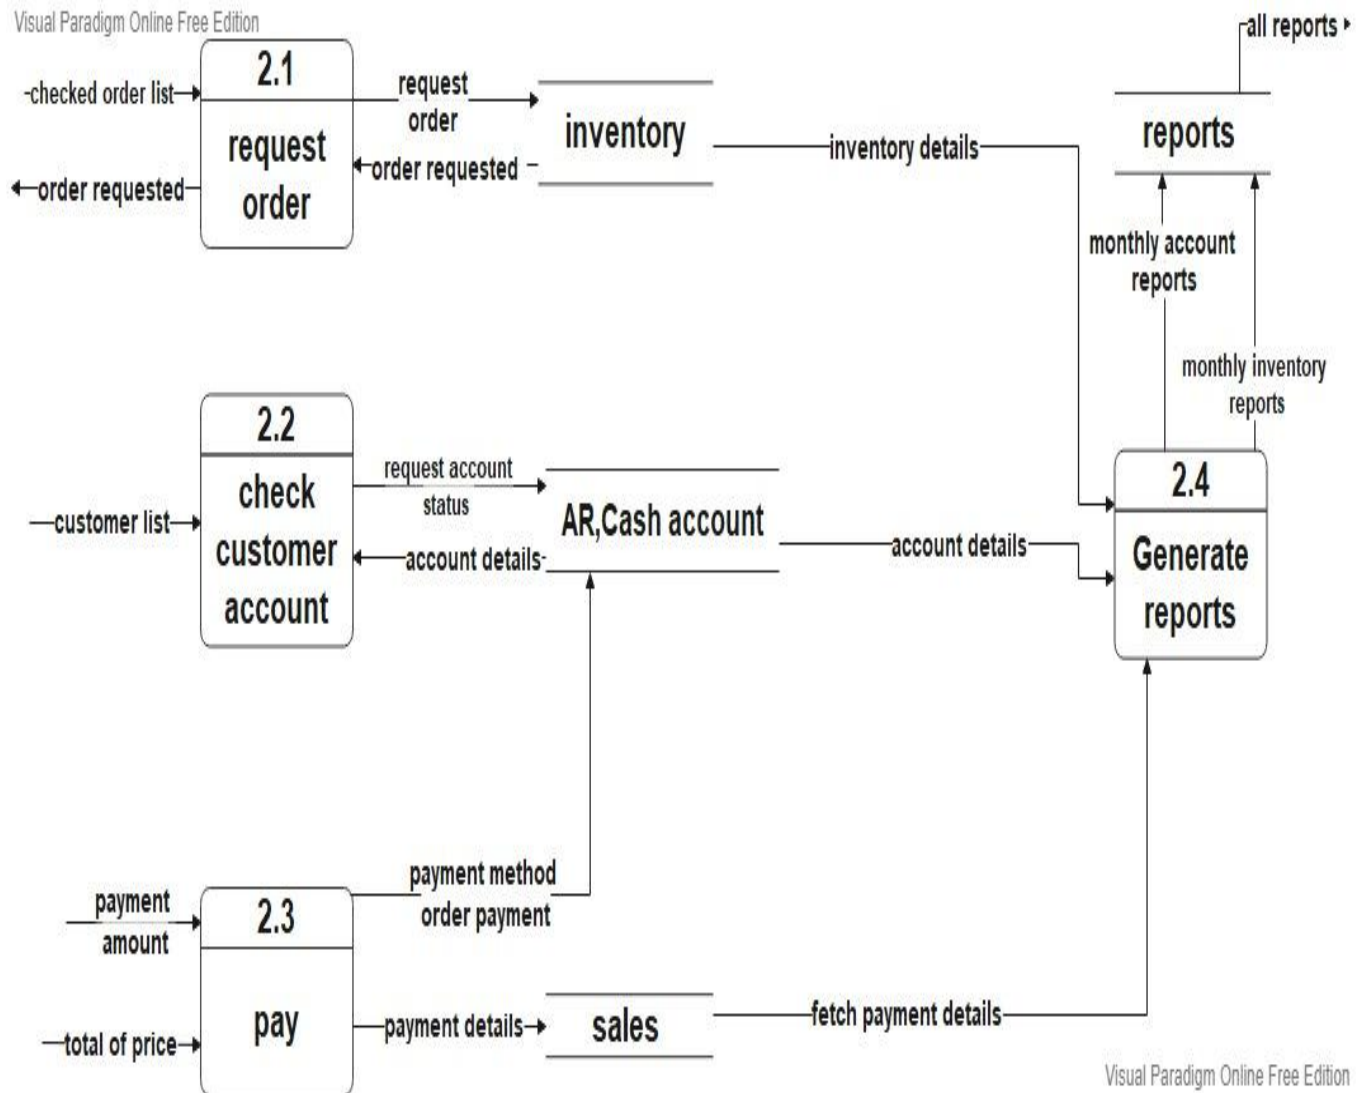

[illegible]

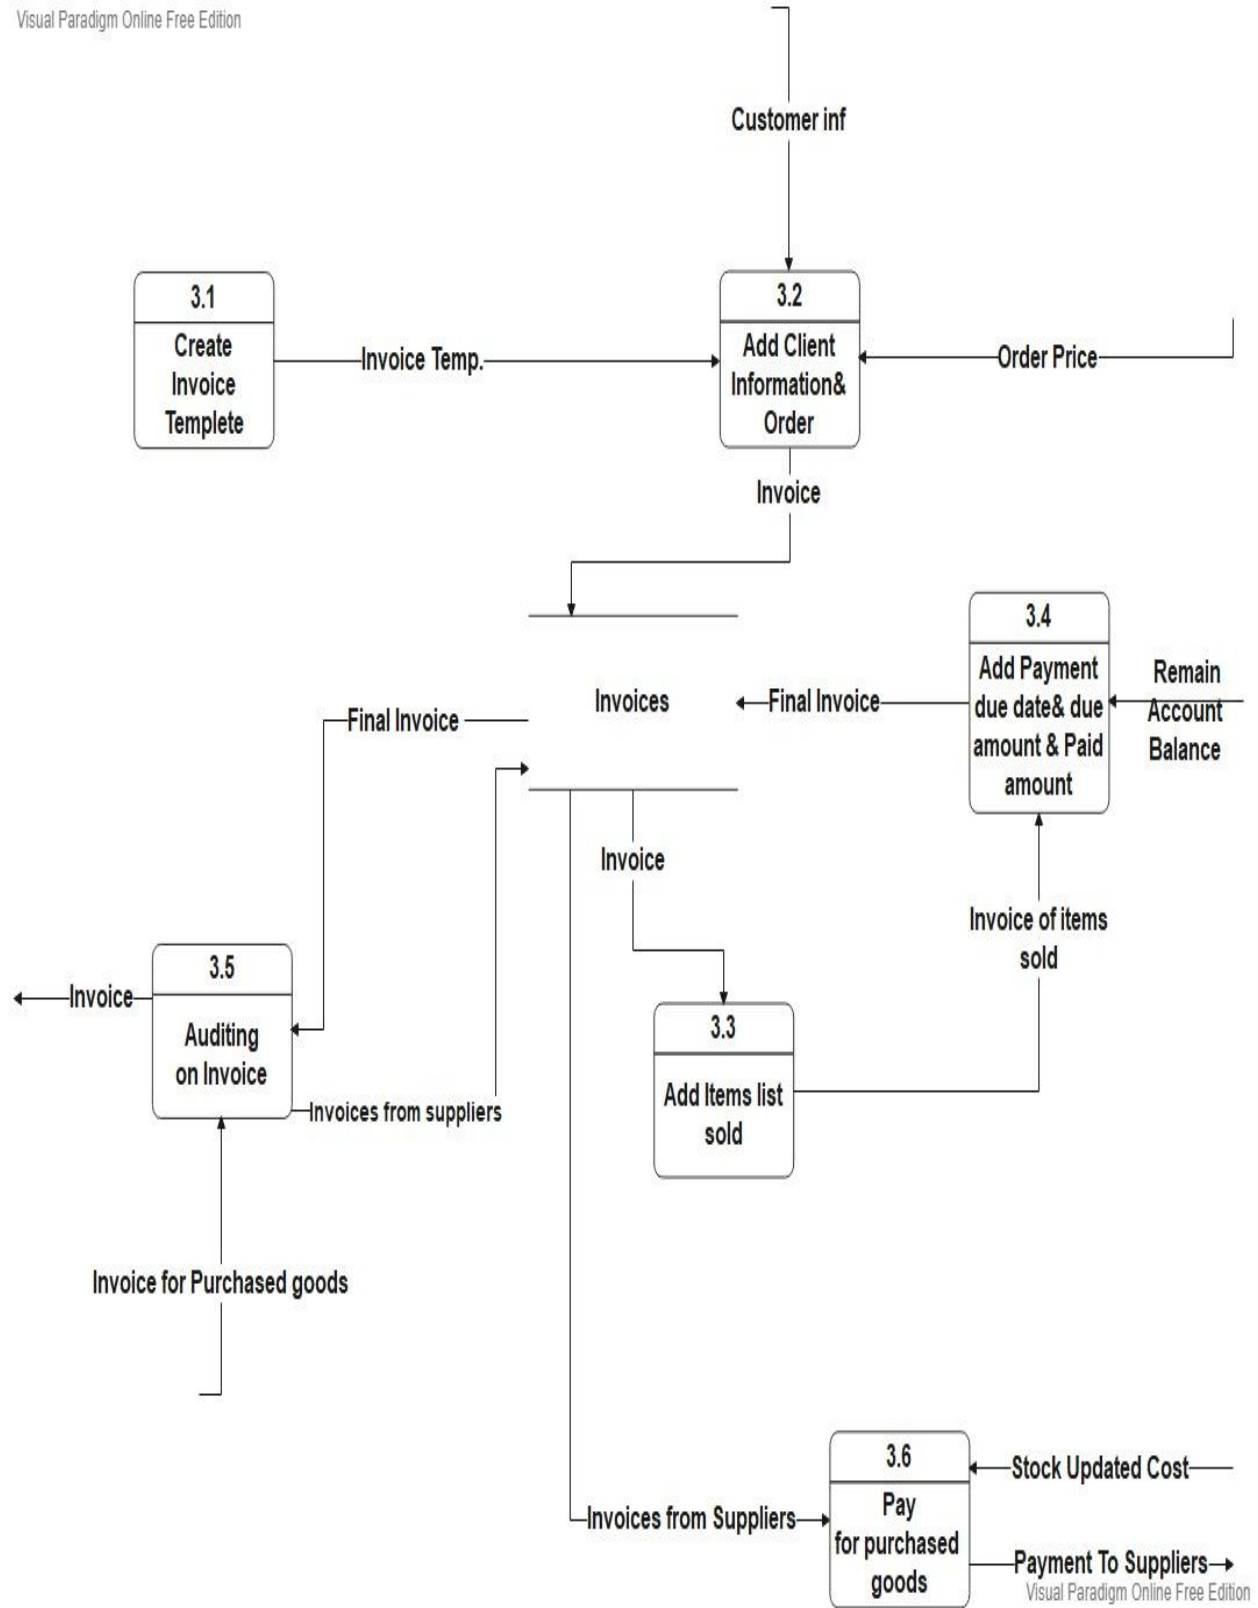

Context Data Flow Diagram

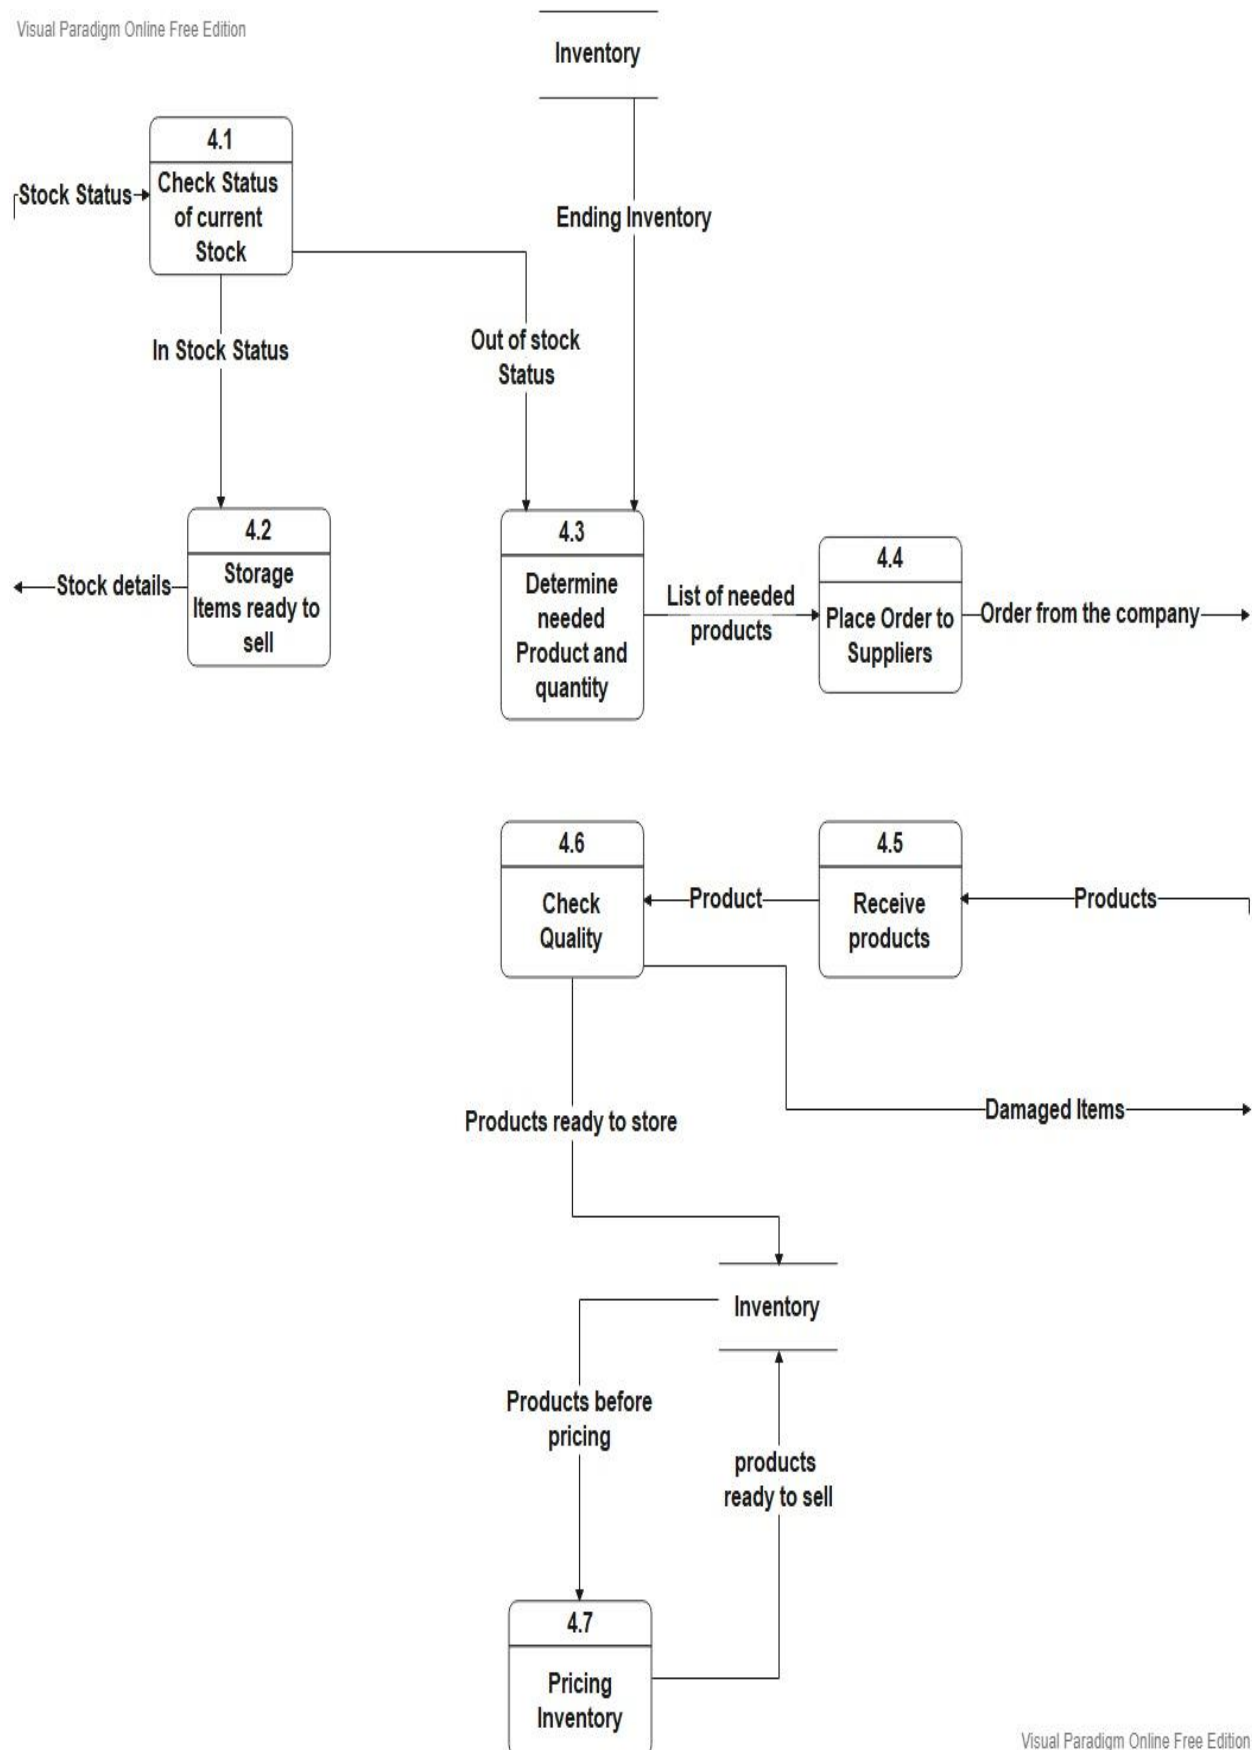

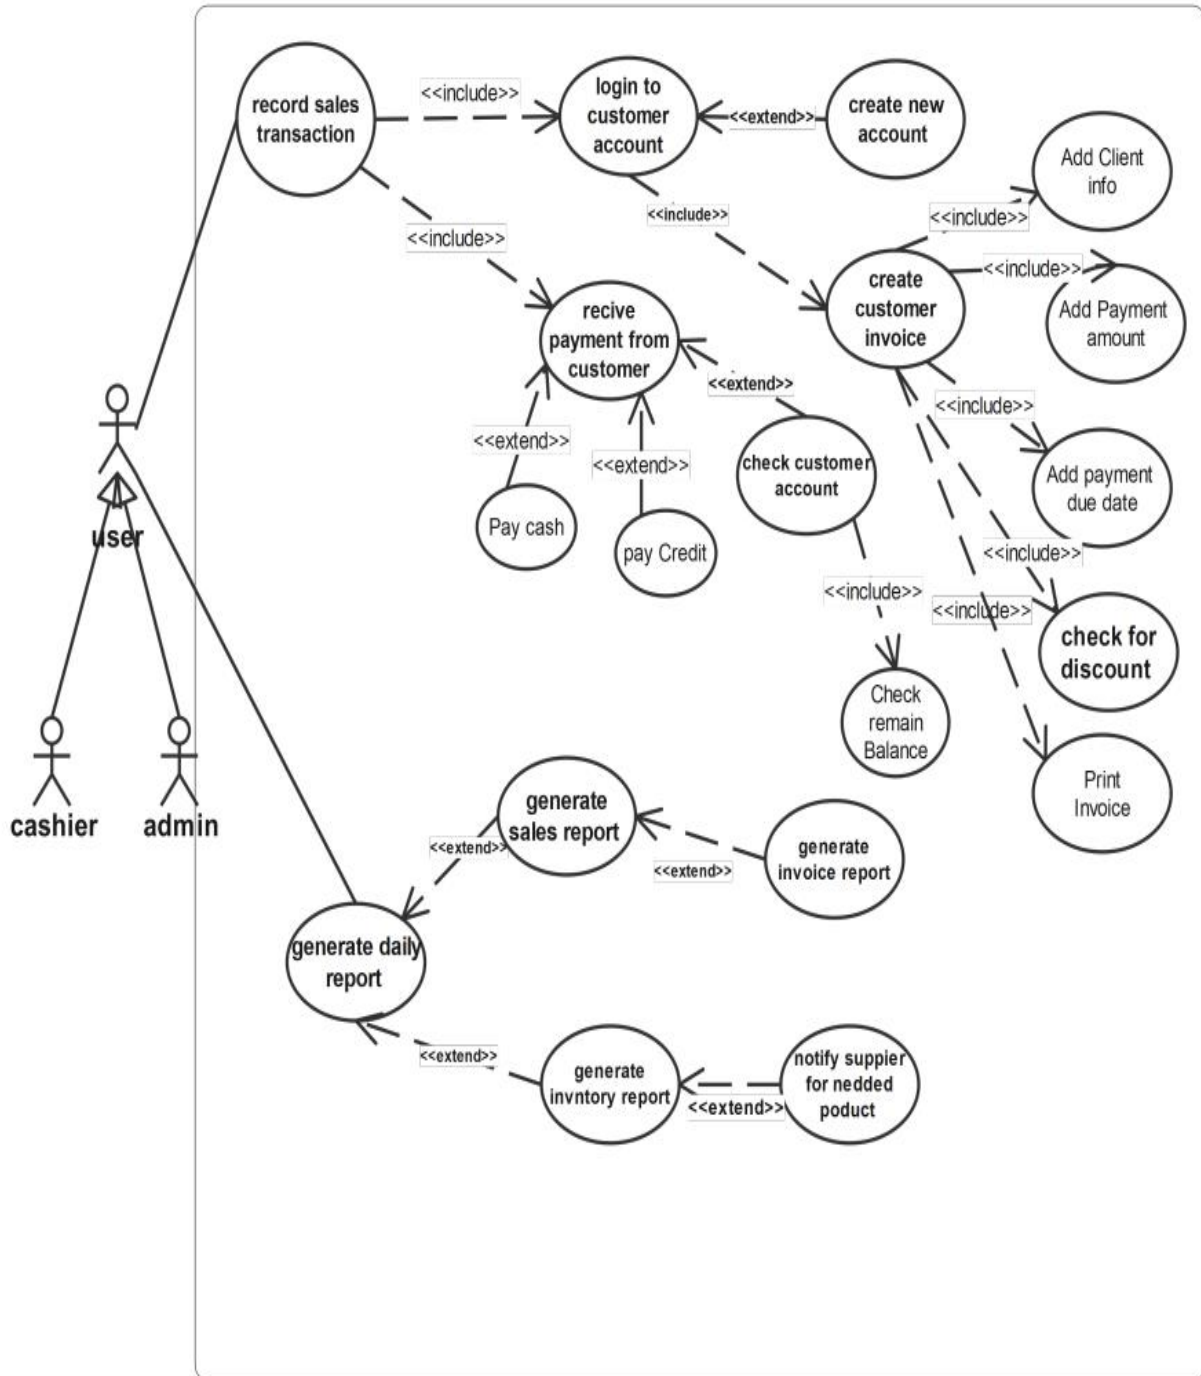

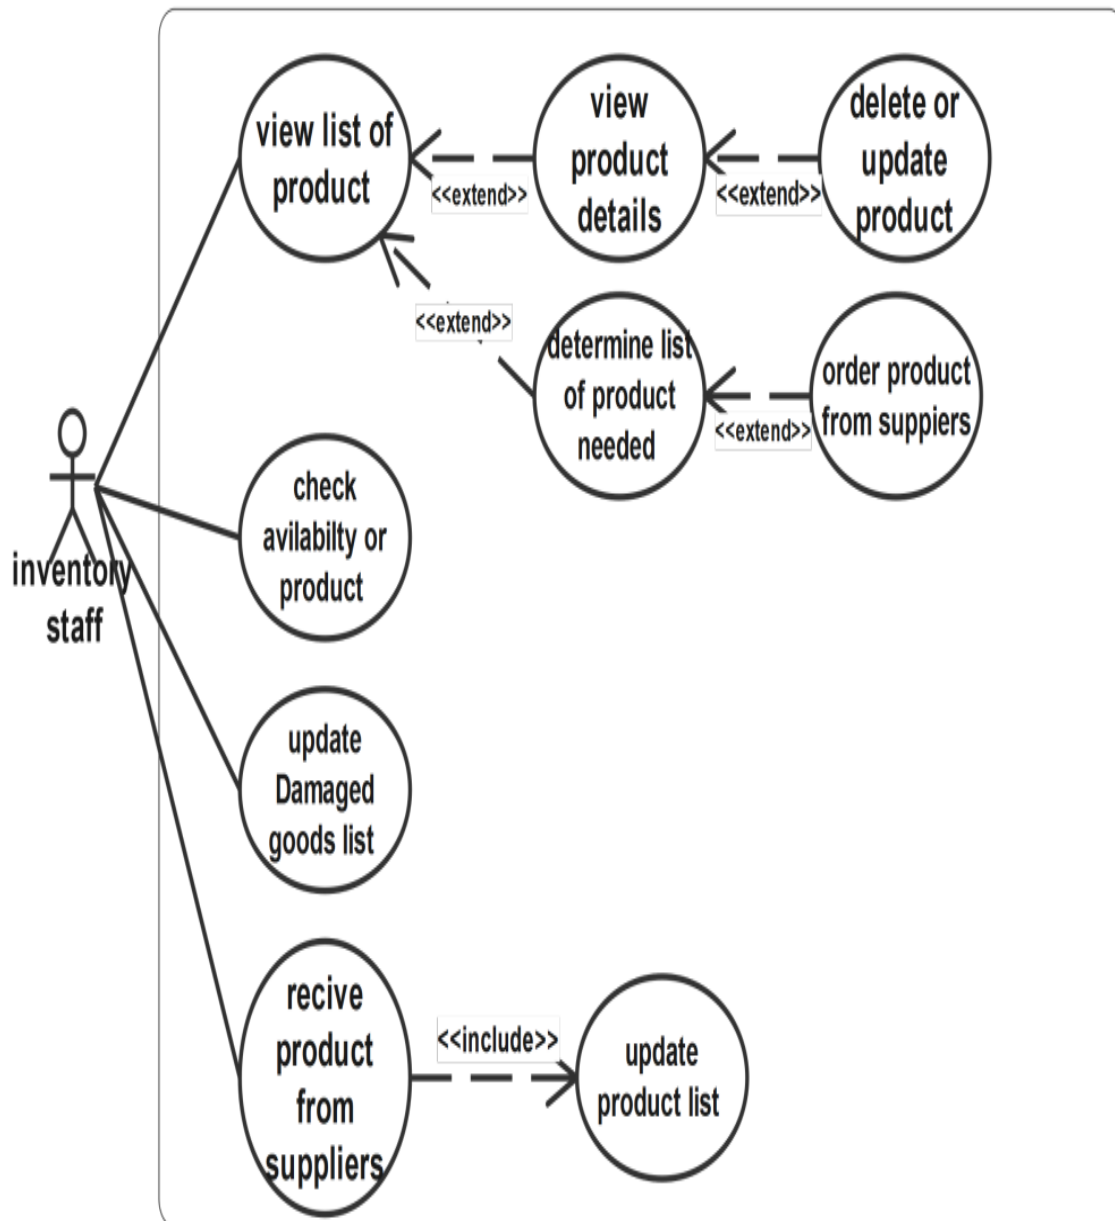

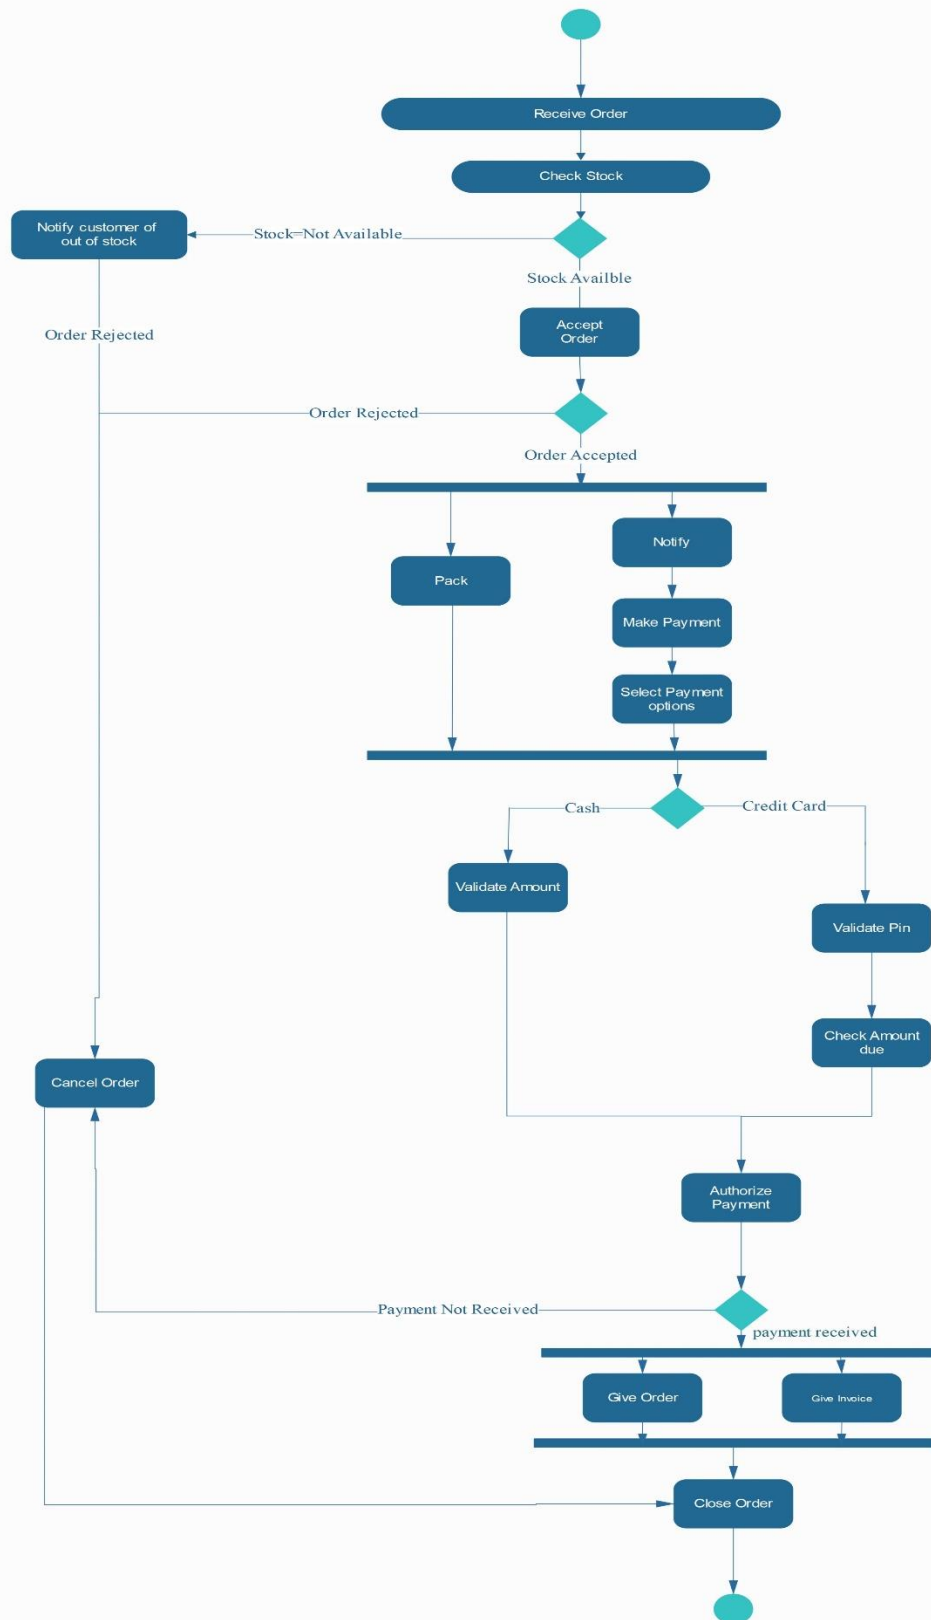

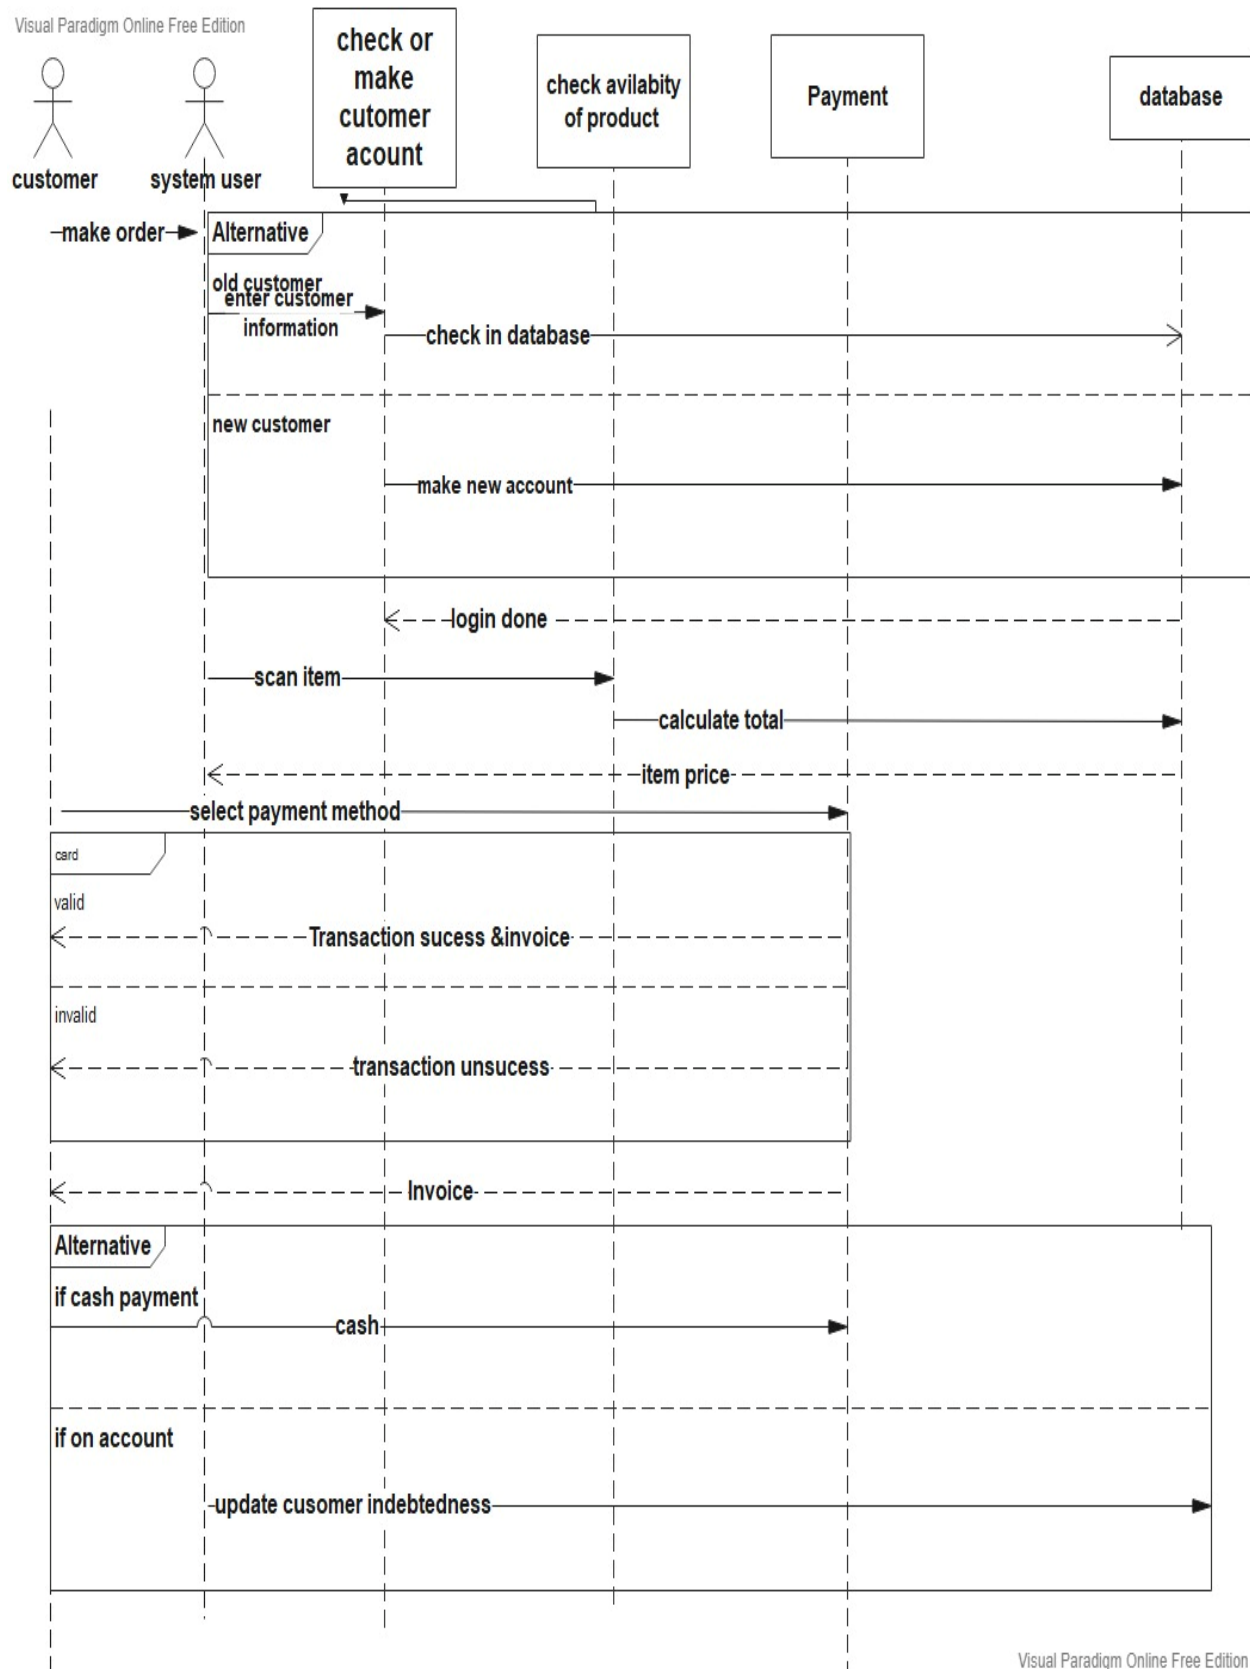

Data Flow Description

ID:1

Name: customer order information

Description: contains the list of products that customer wants to buy

Destination: manage customer info

Source: customer entity

Type of data Flow:

✓ **Screen**

Volume/Time:

Data Structure Traveling with the Flow: order details =
product serial number +
product name

Comments: customer can order more than one product

Element Description Form

ID: 6

Name: product serial number

Alias: Bar code

Description: a unique number or string of characters that identifies a product.

Element Characteristics

Length: 20

Input format: 18(12)

Output format: 18(12)

Default Value: Discrete

☐ **Continuous** ☐ **Discrete** (yes)

☒ **Alphabetic** (yes)

☒ **Alphanumeric** (yes)

☐ **Date**

☒ **Numeric** (yes)

☒ **Base** (yes) **or** ☐ **Derived**

Validation Criteria

Continuous

Upper Limit:

Lower Limit:

Discrete

Value

Meaning

Comments:

Data Store Description Form

ID: D1

Name: Customer

Alias: Client

Description: Everything we need to know about customer like name, age, address, phone and id

File Type: ☒ Computer ☐ Manual

File Format: ☒ Database ☐ Indexed

☐ Sequential ☐ Direct

Record size:150

Number of Record: Maximum: 50,000

Average: 35,000

Growth Percent: 6%

Data Set Name: Customer

Data Structure: Customer Record

Primary Key: customerNumber

Secondary Key: none

Comments: The Customer file records are

copied to a history file records to be checked if they're correct, validate, and if they weren't correct then this process can't be completed . Customer files are renewed with each update to make sure the information is correct.

Data Store Description Form

ID: D6

Name: Invoices

Alias: receipt

Description: records a transaction between a buyer and a seller

File Type: ☒ Computer ☐ Manual

File Format: ☒ Database ☐ Indexed

☐ Sequential ☐ Direct

Record size: 255

Number of Record: Maximum: 50,000

Average: 35,000

Growth Percent: 6%

Data Set Name: Invoices

Data Structure: Invoice number

Primary Key: invoice_id

Secondary Key: none

Comments: The Invoice Store is a complete Invoicing, POS, Estimating and Customer Tracking software product for the business, invoice template provides space to store the description of the products purchased by the customer and the total amount. It includes details on the sales representative.

Process Description Form

ID: 3

Name: payment

Description: reviewing and approving a merchant application for payment processing services

Output Data Flow:- invoice

- Payment
- Check of credit balance
- Payment reports

Input Data Flow:- payment

- Customer inf
- Requested order price
- Stock updated price
- Invoice
- Remain balance
- Copy of invoice
- Invoice recover

Type of Process:

Batch

Process Logic: Get Requested order

Get Stock Price

perform check in Customer Account

Perform invoice creation
